

## Is Facelift Surgery Right for Me?

A facelift can only be performed surgically; non-surgical rejuvenation treatments cannot achieve the same results, but may help delay the time at which a facelift becomes appropriate and complement the results of surgery.

Facelift surgery is a good option for you if:

- You are physically healthy
- You do not smoke
- You have a positive outlook and specific, but realistic, goals in mind for the improvement of your appearance

## Need a plastic surgeon and don't know who to choose?

Amerejuve is the premier provider of cosmetic surgery in the Greater Houston area with eight locations. Our surgeons provide complimentary consultations in each Amerejuve office, as well as in their private offices they use on a daily basis. No matter what day or area of town you may be in, there is always a convenient location near you.

Have a tummy that doesn't look like it used to? Consider Liposuction (fat removal), a Mommy Makeover, or an Abdominoplasty (tummy tuck). Hate the fat on your arms or legs? Consider Brachioplasty (arm lift), Thigh Lift or Liposuction. Always wanted larger breasts? Consider Breast Augmentation. We also do Mastopexy (breast lift) and Breast Reduction. Does your face make you look older than you are? Blepharoplasty (eyelid rejuvenation) gives dramatic results with minimal down time and virtually invisible scars. For more improvement, consider a Mini- or Full Facelift, Brow Lift, or Neck Rejuvenation. Hate the lump on your nose? A Rhinoplasty (nose reshaping) can correct it.

While other surgeons may give you different prices that complicate your decision, you will receive the same Amerejuve standard price for your procedure, regardless of which Amerejuve surgeon you choose. So choose your procedure, and choose your surgeon—it doesn't cost more at Amerejuve.

Amerejuve offers multiple plastic surgeons for you to choose from to fit your needs and expectations. Knowing that our plastic surgeons are double-board certified and have extensive plastic surgery experience can make you feel confident going through with the surgery and body transformation of choice. Regardless of whom you choose, at Amerejuve, you are guaranteed to be treated with the respect and excellent customer service you deserve.

And, unlike most surgery offices, Amerejuve can offer Amerefit personalized weight & wellness services to help you maximize the benefits of your surgical procedure, as well as improve your health and wellbeing. Look Good, Feel Good!

# FACELIFT

## What Is a Facelift?

A Facelift (Rhytidectomy) is a surgical procedure designed to smooth and firm the skin, providing a fresh, youthful appearance. Throughout one's life, the sun's radiation, stress, gravity, and other factors cause the skin to sag and fit more loosely. Areas of the face and neck, in particular around the jaw line, are especially prone to the aging process. Though these changes are gradual, wrinkles and other signs of aging can make individuals feel older than they really are.

Surgery for a facelift involves the contraction and realignment of facial and neck skin, and in some instances the removal of excess fat deposits. A facelift is often performed in combination with other facial cosmetic procedures and can be performed any time signs of aging begin to appear. However, patients are generally in their forties or older when they elect to undergo this procedure.

## Reasons for Considering a Facelift:

- Sagging skin, muscles, and fat in the face and neck.
- Excess skin and fat on the neck.
- Sagging jaw line.
- Crease lines along the nose, mouth, and chin.

## General Procedure

The standard procedure for a facelift commonly involves making small incisions just inside the hairline, following the contour in front of the ear, and continuing under the earlobe to the backside of the ear and to the lower scalp. Tissue and fat deposits are separated, the skin is stretched and tightened, and any excess skin is removed.

*"In my 50s, I felt 40 and looked 60. Now I am 60 and I look and feel much younger than my age!"*

*K. Jackson, age 61*

# look good feel good

If the neck line requires attention, an additional incision is made under the chin and the same procedure is again followed. Minuscule stitches are used to close the incisions and to reduce any chance of scarring. Metal clips or staples may also be utilized at the hairline.

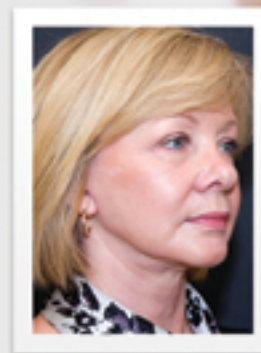

A facelift may take several hours or longer depending on whether other cosmetic procedures are completed at the same time. Sometimes other procedures may be performed in separate appointments. There are several different facelift techniques that can be employed. Patients can discuss with their physician which method is best for them when they come in for their consultation.

## Recovery Process

Immediately after surgery, the face is fitted with bandages in order to decrease the recovery time and to reduce swelling. Generally, post-operative instructions call for plenty of rest and limited movement in order to speed up the healing and recovery process. The stitches, clips or staples are normally removed within a week. Patients sometimes report some minor pain associated with surgery. Any discomfort can be treated effectively with oral medication. While complications are rare, patients can minimize potential problems by carefully following the directions given after the procedure.
